CUHAS, Mwanza

14–18 September 2026

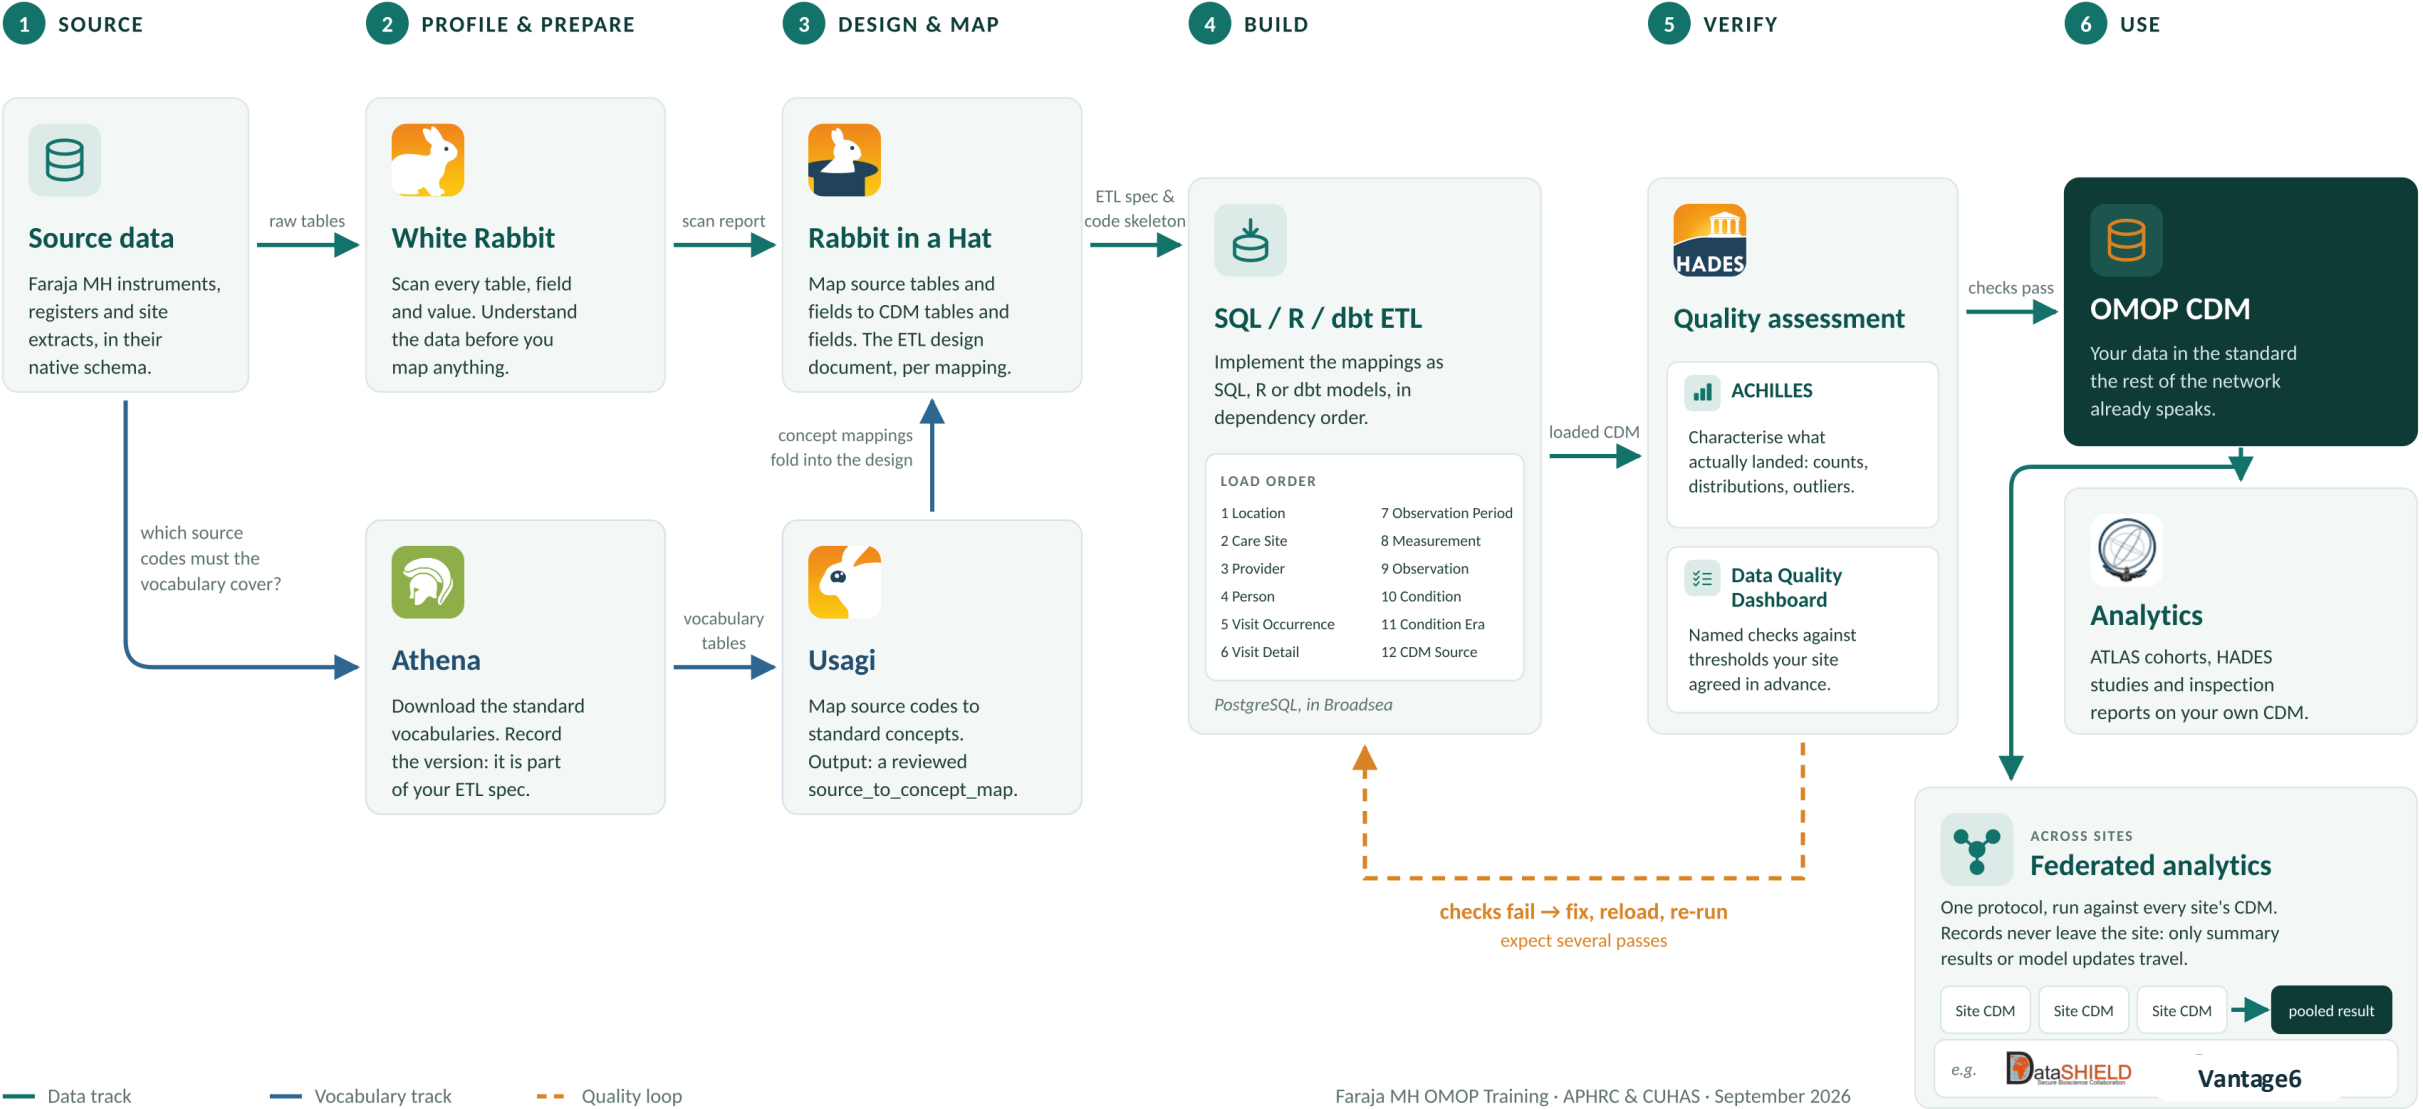

Five-day learning journey

The programme moves from responsible mental health data collection to a tested OMOP dataset and analysis environment

From source data to analytics

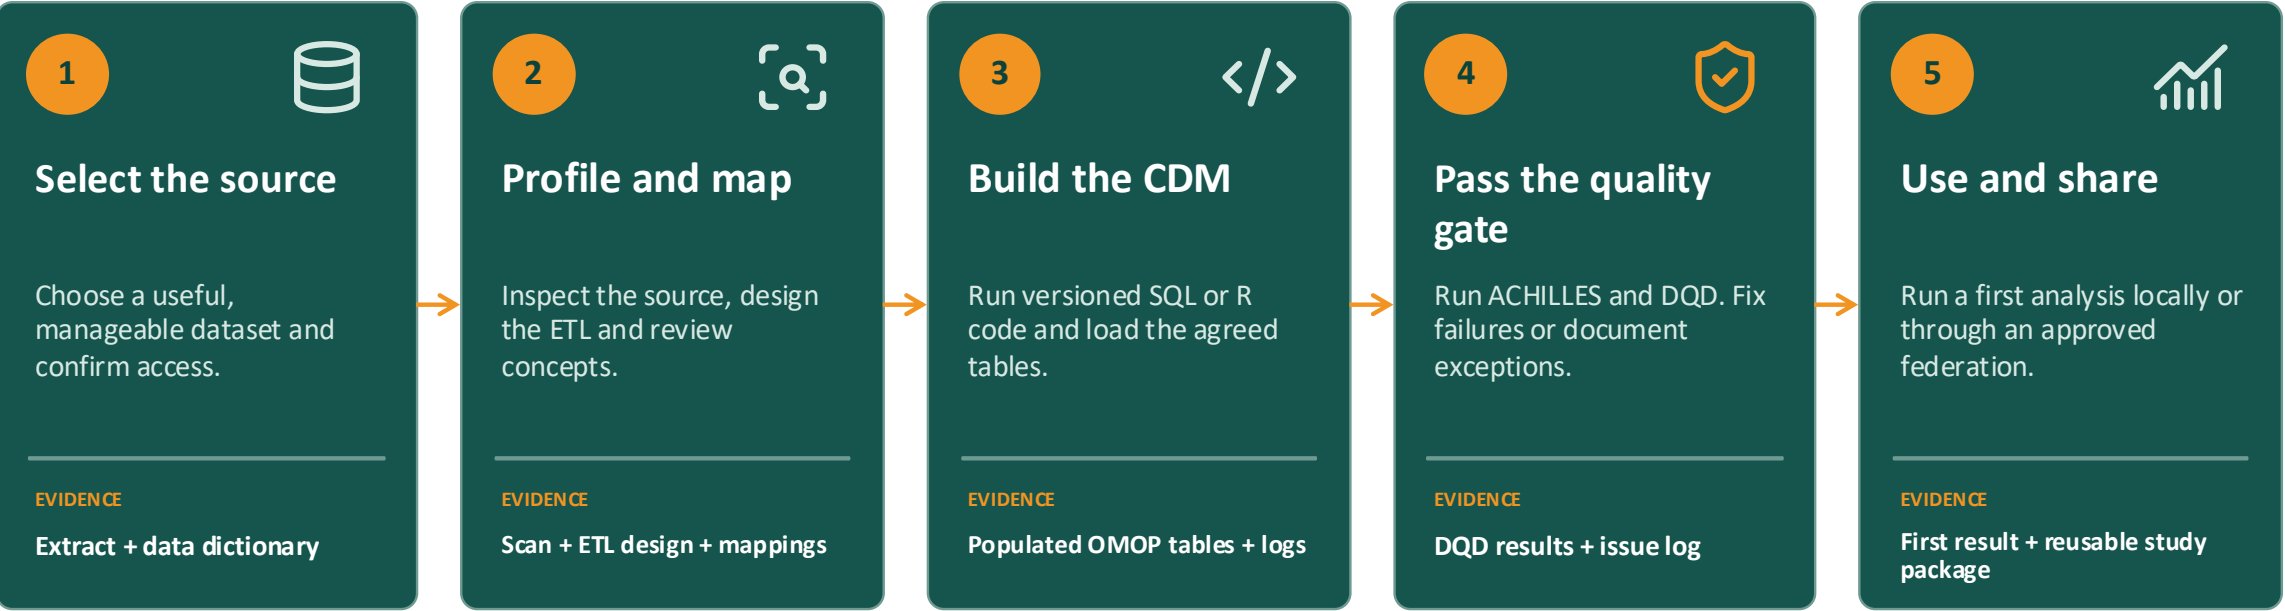

The OHDSI toolchain end to end, and what each step hands to the next.

Your site pipeline challenge

Each team repeats the complete workflow with one priority source dataset

START SMALL
One dataset, end to end

TOOLS USED DURING THE CHALLENGE

Definition of done

A colleague can rerun the pipeline

Code, mappings and versions are stored together

The site approves the QA evidence and first use

OHDSI support after the training

Use the Africa Chapter for regional implementation questions and specialist workgroups for focused technical or clinical issues

OHDSI Africa

Start with the Africa Chapter

Best for regional implementation experience, local terminology and peer review of ETL or mapping decisions.

- Bring the problem and its local context
- Show what the team has already tried
- Check current calls and events in OHDSI Teams
- [Biweekly meetings on Thursdays](#)

NEXT CONNECTION POINT

Africa Chapter symposium, Addis Ababa
27–29 September 2026

Route each question to the right group

CDM table or field design

Common Data Model

Failed DQD checks

Network Data Quality

R analytics and study packages

HADES

Mental health scales or vocabularies

Psychiatry

Concept mapping or missing terms

CDM Vocabulary

ATLAS or WebAPI configuration

ATLAS / WebAPI

Geospatial linkage

GIS
